DETAILED ACTION

1. A request for continued examination under 37 CFR 1.114 was filed in this application after appeal to the Board of Patent Appeals and Interferences, but prior to a decision on the appeal. Since this application is eligible for continued examination under 37 CFR 1.114 and the fee set forth in 37 CFR 1.17(e) has been timely paid, the appeal has been withdrawn pursuant to 37 CFR 1.114 and prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on March 21, 2005 has been entered.

2. Claims 1-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Begala (5,185,062 or 5,595,629).

Begala discloses sizing agents, column 5 and 4 respectively of Begala '062 and '629. Separate addition of cationic polymer and anionic polymer is taught. The addition of anionic polymer containing sulfonate groups having molecular weights as low as 30,000 is disclosed in column 6 of each patent. The cationic polymer has aromatic group such as dimethylaminoethyl benzyl chloride acrylamide quaternary group, which is preferred. Note in regard to claim 6 and 7, Begala '062 discloses sulfonated styrene polymer.

Begala et al is silent as to the use of reactive size as the sizing agent. However, in view of the fact that reactive size is a standard and conventional paper making size (which is admitted to by Applicant on page 1 of the specification), it would have been obvious matter of choice. Moreover there is no criticality as which type of conventional

size, i.e., reactive or non-reactive size, is used in the present invention, see page 2 of the specification.

3. Applicant's arguments have been considered but are deemed unpersuasive of patentability. The fact that Applicant may have recognized an additional beneficial result in an old process does not make the claimed invention patentable. Contrary to Applicant's allegation, Begala discloses the presence of an aromatic group as noted above.
